Carver Laraway, President  
Carver Companies  
270 River Road  
Coeymans, NY 12045

Dear Mr. Laraway:

The following information is offered in response to your request for connection of the proposed General Electric (GE) project to the Town of Coeymans sewer system and waste water treatment plant (WWTP). The Town of Coeymans Planning Board/Zoning Board of Appeals has received applications for the proposed GE wind turbine blade Site Plan and Area Variance for a side setback for one of the manufacturing buildings.

The Town of Coeymans WWTP SPDES Permit currently allows for 820,000 GPD maximum flows and the current average daily flows to the WWTP are on the order of approximately 400,000-500,000 GPD. It is my understanding that the proposed wind manufacturing facility will utilize approximately 10,000-15,000 GPD of water with a similar amount for sewer discharge. The project will extend sewer from near the Coeymans Industrial Park entrance northerly along the NYS Route 144 right of way to the GE site at the improved Holcim entrance. This proposed sewer extension will involve installation of approximately 5,000 LF of 8-inch gravity sewer along the western edge of the NYS Route 144 right of way. It is further understood that these projected sewer flows do not involve industrial or process waters.

Based upon the information received, and upon review of the project proposal with our Chief Waste Water Treatment Plant Operator, the Town of Coeymans WWTP has the capacity and willingness to accept the anticipated flows from the proposed GE manufacturing project.

Very Truly Yours,

  
George D. McHugh  
Town Supervisor

cc: Coeymans Town Clerk  
Coeymans Town Board
